

# FITTING THE WALK RIGHT! CONTROL HARNESS

---

**Adjust harness so that back slide is not under front legs.  
This adjustment should be made to avoid pinching or  
discomfort under the front legs.**

1. Open the harness.
2. Adjust loop (A) to comfortably slip over the dog's head by moving slides (B) & (C) equal distances.
3. Facing your dog, slip the entire harness over the dog's head.
4. Reaching between the straps, have the dog step through right and left loops. Position harness on dog as illustrated above.
5. Remove the slack from around the girth by lifting the Leash-Ring and sliding the Keeper down toward the Control Slide.
