Description:
Ivermectin Sheep Drench is a ready-to-use, free-flowing solution of ivermectin. It is formulated to deliver the recommended dose rate of 0.2 mg ivermectin per 1 kg body weight given orally at a volume of 3.0 mL per 26 lbs body weight.

Indications:
Ivermectin Sheep Drench provides treatment and control of adult and fourth-stage larvae of the following parasites: Gastrointestinal Roundworms – Haemonchus contortus, Ostertagia circumcincta, Trichostrongylus axei, T. colubriformis, Cooperia curticei, Nematodirus spathiger, N. battus, and Oesophagostomum columbianum; Lungworms – Dictyocaulus filaria; and all the larval stages of Nasal Bot – Oestrus ovis. It also provides treatment and control of adult forms only of the following Gastrointestinal Roundworms – Haemonchus placei, Cooperia oncophora, Strongyloides papillosus, Oesophagostomum venulosum, Trichuris ovis, and Chabertia ovina.

Approved For Use On:
Sheep

Active Ingredient:
ivermectin.............. 0.08%

Product Advantages:
- Unique chemistry-unrelated to existing formulations. Because Ivermectin Sheep Drench is chemically different, cross-resistance is unlikely in parasite strains which may have developed resistance to other worms.
- Broad-spectrum effectiveness: One low-volume dose effectively treats and controls many gastrointestinal roundworms (including Haemonchus contortus), lungworms, and nasal bots.
- Easy administration: Ivermectin Sheep Drench can be administered with any standard drenching equipment or any equipment that provides a consistent dose volume.

Direction For Use:
Ivermectin Sheep Drench may be used in any standard drenching equipment or in any equipment which provides a consistent dose volume. Ivermectin Sheep Drench is administered orally at a dose of 3.0 mL (2.4 mg ivermectin) per 26 lbs body weight or 200 mcg ivermectin per kilogram of body weight.

Coughing may be observed in some animals during and for several minutes following drenching.

Packaging:
240mL, 6 bottles per case, UPC # 7-45801-11067-0
- contains 20 - 100 lb. doses
960 mL, 4 bottles per case, UPC # 7-45801-11068-7
- contains 83 - 100 lb. doses
Ivermectin Sheep Drench (ivermectin) 0.08% Solution Parasiticide

For the Treatment and Control of Worms and Bots of Sheep

PRODUCT DESCRIPTION
Ivermectin Sheep Drench is a liquid, administered orally to sheep, consisting of an 0.08% solution of ivermectin. Ivermectin is a unique chemical entity, and as such, the chances of cross-resistance in parasites that have developed resistance to other worms is highly unlikely. Additionally, its convenience, broad spectrum efficacy, and wide therapeutic index make Ivermectin Sheep Drench an exceptionally valuable product for parasite control in sheep. Consult your veterinarian for assistance in diagnosis, treatment, and control of parasitism.

DOSENG
Ivermectin Sheep Drench is formulated only for administration to sheep; do not use in other species. The recommended dose level is 3 mL of Ivermectin Sheep Drench, containing 2400 mcg ivermectin, which is sufficient to treat 26 pounds of body weight.

ADVANTAGES

Broad spectrum effectiveness:
One low-volume dose effectively treats and controls many gastrointestinal roundworms (including Haemonchus contortus), lungworms, and bots.

Easy administration:
Ivermectin Sheep Drench can be administered with any standard drenching equipment or any equipment that provides a consistent dose volume.

FORMULATION
Ivermectin Sheep Drench is an 0.08% w/v pale amber colored solution of ivermectin. Ivermectin is derived from the avermectins, a family of highly active, broad spectrum, antiparasitic agents which are produced from fermentation products of Streptomyces avermitilis.

PRODUCT INDICATIONS
Ivermectin Sheep Drench is indicated for the effective treatment of gastrointestinal roundworms (including Haemonchus contortus), lungworms, and bots in sheep. When used as recommended, it provides effective control of the parasites shown in the table.

DOSAGE
Ivermectin Sheep Drench should only be administered orally at the recommended dose level of 200 mcg ivermectin per kilogram of body weight. Three mL of Ivermectin Sheep Drench contains sufficient ivermectin to treat 26 pounds of body weight.

ADMINISTRATION
Any standard drenching equipment, or any equipment which provides a consistent dose volume, can be used. Dose rates and equipment should be checked before drenching commences. Be sure the head is properly positioned for drenching. Ivermectin Sheep Drench is readily accepted by sheep, but intraocular coughing may be observed in some animals during and for several minutes after drenching. If slobbering occurs, the dose may be lost, and that sheep should be redosed.

FREQUENCY OF DOSING
Resistant parasites are a particular problem in sheep. Please consult your veterinarian, county extension office or animal health supplier for the control program recommended in your area.

RESIDUE INFORMATION: Sheep must not be treated within 11 days of slaughter.

Keep this and all drugs out of reach of children. The Material Safety Data Sheet (MSDS) contains more detailed occupational safety information. To report adverse effects in users, to obtain an MSDS, or for assistance call 1-800-821-5670.

MODE OF ACTION
The avermectin family of compounds, of which ivermectin is a member, kills certain parasitic nematodes (roundworms) and arthropods. The action is unique and not shared by other antiparasitic agents and involves a chemical that serves as a signal from one nerve cell to another, or from a nerve cell to a muscle cell. This chemical, a neurotransmitter, is called gamma-aminobutyric acid or GABA. In roundworms, ivermectin stimulates the release of GABA from nerve endings and enhances binding of GABA to special receptors at nerve junctions, thus interrupting nerve impulses - thereby paralyzing and killing the parasite.

The enhancement of the GABA effect in arthropods resembles that in roundworms except that nerve impulses are not interrupted between the nerve ending and the muscle cell. Again, this leads to paralysis and death in most species. Ivermectin has no measurable effect against flies or tapeworms, presumably because they do not have GABA as a nerve impulse transmitter. Recommended doses of ivermectin have a wide safety margin in livestock. The principal peripheral neurotransmitter in mammals, acetylcholine, is unaffected by ivermectin. Ivermectin does not readily penetrate the central nervous system of mammals where GABA functions as a neurotransmitter.
**Ivermectin Sheep Drench**

**0.08% Solution**

**Parasiticide**

**STABILITY**
Ivermectin Sheep Drench is stable for 24 months when stored under normal conditions. Protect from light.

**SAFETY**
Ivermectin Sheep Drench has been demonstrated to have a wide safety margin at the recommended dose level and may be used in sheep of all ages. Exempts may be treated at any stage of pregnancy.

**ACCEPTABILITY**
Coughing may be observed in some animals during and for several minutes following drenching.

**ENVIRONMENTAL SAFETY**
Studies indicate that when ivermectin comes in contact with the soil, it readily and tightly binds to the soil and becomes inactive over time. Free ivermectin may adversely affect fish and certain water-born organisms on which they feed. Do not permit water runoff from feedlots to enter lakes, streams, or ground water. Do not contaminate water by direct application or by the improper disposal of drug containers. Spills of Ivermectin Sheep Drench should be contained and soaked up with absorbent towels or into loose soil. Gloves should be worn to prevent skin exposure. All the collected materials (contaminated towels and soil), as well as all used drug containers, should be placed in an impervious film bag (plastic) and disposed of by incineration or in an approved landfill.

**PRECAUTIONS**
Ivermectin Sheep Drench has been formulated for use in sheep ONLY. This product should not be used in other animal species as severe adverse reactions, including fatalities in dogs, may result. This product is not to be used parenterally. Protect from light. Store at controlled room temperature between 15°-30°C (59°-86°F). Keep container tightly closed when not in use.

**HUMAN SAFETY**
When used as recommended in sheep, Ivermectin Sheep Drench does not pose a hazard to human health. As a routine precaution, it is advisable to wash hands after use. As with all drugs, the product should be kept out of reach of children. Contact with skin and eyes should be avoided, but protective clothing is not required.

For customer service, contact Durvet, Inc., Blue Springs, MO 64014 www.durvet.com

**FOR ORAL USE IN SHEEP ONLY**
Consult your veterinarian for assistance in diagnosis, treatment, and control of parasitism.

**DESCRIPTION:**
Ivermectin Sheep Drench is a ready-to-use, free-flowing solution of ivermectin. It is formulated to deliver the recommended dose rate of 0.2 mg ivermectin per 1 kg body weight given orally at a volume of 3.0 mL per 26 lbs body weight.

**INDICATIONS:**
Ivermectin Sheep Drench provides treatment and control of adult and fourth-stage larvae of the following parasites: Gastrointestinal Roundworms – Haemonchus contortus, Ostertagia circumcincta, Plectouronchus ovis, T. colubriformis, Cooperia curticei, Haemonchus placei, and Oesophagostomum columbianum. Lungworms – Dictyocaulus filaria, all the larval stages of Nasal Bot – Glestus ovai. It also provides treatment and control of adult forms only of the following Gastrointestinal Roundworms – Haemonchus pluvialis, Cooperia oesophagous, Strongyloides papillosus, Oesophagostomum venulosum, Trichuris ovis, and Ophelina avena.

**DIRECTIONS FOR USE:**
Ivermectin Sheep Drench may be used in any standard drenching equipment or in any equipment which provides a consistent dose volume. Ivermectin Sheep Drench is administered orally at a dose of 3.0 mL (2.4 mg ivermectin) per 26 lbs body weight or 200 mcg ivermectin per kilogram of body weight. Coughing may be observed in some animals during and for several minutes following drenching.

**KEEP THIS AND ALL DRUGS OUT OF REACH OF CHILDREN.**
Refrain from smoking and eating when handling. Avoid contact with eyes. Immediately wash hands and any spills on the skin with plenty of soap and water following use.

**PACKAGING:**
Ivermectin Sheep Drench is available in a convenient pack size. The 32.46 fl oz (960 mL) pack contains sufficient solution to treat 80 sheep averaging 100 lbs. The packs are high-density polyethylene containers, colored opaque white, with screw caps and tamper evident seals. They are shipped in cardboard cartons as follows: 4 x 960 mL containers per case.

**Restrict Drug (California) - Use Only as Directed**
