

Equi-Jec® WNV

West Nile Virus Killed Vaccine

Description

Equi-Jec® WNV is an equine West Nile Virus vaccine.

Features

- Contains a contemporary West Nile Virus strain
- Safe for pregnant mares
- Safe for horses as young as 4 months of age
- Duration of immunity 12 months for West Nile Virus

Benefits

- Single dose pre-filled syringe

Advantages

Equi-Jec® WNV protects against West Nile Virus.

Dosage & Administration

Shake well before use. Using aseptic technique, administer to horses intramuscularly with a 1 mL dose. Administer a second 1 mL dose intramuscularly in 3-4 weeks using a different injection site. Revaccinate annually and prior to anticipated exposure with a single 1 mL intramuscular dose. Consultation with a veterinarian is recommended.

Precautions

Store at 35-46°F (2-8°C). Protect from freezing. Do not vaccinate within 21 days before slaughter. Do not mix with other products.

Antidote: Epinephrine

Uses

For the vaccination of healthy horses 4 months of age or older as an aid in the reduction of severity of clinical disease and as an aid in the prevention of viremia and mortality, caused by West Nile Virus. Safe for use in pregnant mares.

Warning

This product has been tested under laboratory conditions and shown to meet all Federal standards for safety and efficacy in normal, healthy, immunocompetent animals. This level of performance may be affected by conditions such as stress, weather, nutrition, disease, parasitism, other treatments, individual idiosyncrasies, or impaired immunological competency. These factors should be considered by the user when evaluating product performance or freedom from reactions.

Highlights

- Contains a contemporary West Nile Virus strain
- Safe for use in pregnant mares
- Safe for use in horses as young as 4 months of age
- Duration of immunity 12 months for West Nile Virus
