PyrantelCare™ Daily Dewormer 2.11%

(pyrantel tartrate)

Equine Anthelmintic

MIXING AND FEEDING DIRECTIONS: PyrantelCare™ Daily Dewormer 2.11% (pyrantel tartrate) is to be administered on a continuous basis either as a top-dress or mixed in the horse's daily grain ration at the rate of 1.2 mg pyrantel tartrate per pound of body weight daily. To achieve this dose, administer 0.5 oz. (½ scoop) of PyrantelCare™ dewormer 2.11% per 250 lb. of body weight. (For example, a 1,000 lb. horse requires 2 oz. or two scoops. See Top-Dress Directions.) Please note that the measuring cup is different in size and shape from the PyrantelCare™ Daily Dewormer 1.06% measuring cup due to the higher concentration of PyrantelCare™ Daily Dewormer 2.11%. PyrantelCare™ dewormer 2.11% should be administered for the entire period that the animal is at risk to internal parasites. Unprotected animals that have grazed may already have an established *S. vulgaris* larval infestation. Before administering PyrantelCare™ dewormer 2.11%, these animals should be treated with a therapeutic dose of a larvicidal product.

Foals may be administered PyrantelCare™ dewormer 2.11% as soon as consistent intake of grain mix is occurring. This is generally between 2 to 3 months of age.

PyrantelCare™ dewormer 2.11% may be used in mares at any stage of pregnancy or lactation. Stallion fertility is not affected by the use of PyrantelCare™ dewormer 2.11%.
